Eduardo Couto

Porto, Portugal
ecouto93@gmail.com | LinkedIn | GitHub | eduardocouto.dev

Software engineer with 4+ years building and operating production systems, from Java microservices and event-driven data pipelines to customer-facing AI applications. Full-stack experience with TypeScript, React, and Hono. Interested in backend and AI engineering roles, particularly remote opportunities across Europe.

Skills

Languages: Java, TypeScript, Kotlin, Go, Python.

Backend: Spring Boot, Quarkus, REST APIs, Apache Kafka, Apache Flink, PostgreSQL.

AI: Spring AI, Model Context Protocol (MCP), large language model (LLM) orchestration, evaluations, guardrails.

Cloud: Amazon Web Services (AWS), Kubernetes, Docker, Terraform, AWS CDK, ArgoCD, GitHub Actions, Grafana.

Web: React, Hono, Next.js.

Work Experience

Blip **Porto, Portugal**
Software Engineer *May 2026–Present*

- Built and now operate a customer-facing AI application in production with Java, Spring Boot, and Spring AI. Integrated MCP and implemented LLM orchestration, agentic workflows with tool calling, conversation state, evaluations, and guardrails.
- Built an LLM observability and feedback tool with TypeScript, React, and Hono, adopted by engineering, QA, and product teams.
- Refined prompts and MCP tool descriptions to correct tool-call sequencing, reducing response latency from approximately 15 to 10 seconds on a fixed evaluation set.

Blip **Porto, Portugal**
Associate Software Engineer *Sep 2024–Apr 2026*

- Maintained core sportsbook services in Java and Kotlin and worked with Apache Kafka. Designed and operated Apache Flink pipelines for high-volume stream processing.
- Improved integration testing with Testcontainers and automated semantic releases. Operated AWS workloads and supported on-call incidents.

Critical TechWorks **Porto, Portugal**
Software Developer *Sep 2022–Sep 2024*

- Migrated Java microservices to Quarkus and helped move on-premises workloads to Kubernetes. Managed AWS infrastructure as code (IaC) with Terraform and automated deployments through GitHub Actions CI/CD pipelines.

Critical TechWorks **Porto, Portugal**
Software Developer Intern *Feb 2022–Aug 2022*

- Improved backend response times through query optimization, database indexes, and in-memory caching, using JProfiler and stress tests to validate changes.

Projects

Java AI Coding Agent: Experimental coding assistant with an iterative loop for file reads, writes, and shell execution. Java, OpenRouter, OpenAI Java SDK.

HTTP Server: Educational HTTP/1.1 server with parsing, routing, file upload and retrieval, and concurrent connections. Kotlin, Java NIO, Coroutines.

Education

2019–2022: B.Sc. in Informatics Engineering, ISEP – Porto.

Certifications

AWS: CloudOps Engineer – Associate (2026); Developer – Associate (2026); Solutions Architect – Associate (2024); Cloud Practitioner (2024).
